Date issued: 26/09/2017

### Your participation in a Motorcycle Apprentice Training

Dear Member

Your motorcycle industry division Executive Committee has been working on improvements to motorcycle apprenticeship training.

As many of you know, there is a technician skill shortage in our industry. Apprentices need to be recruited and well trained so that your investment in them is rewarded through their productivity.

We seek information from you and request a fast response.

1. How many apprentices do you have in your dealership?
2. If you have apprentices, how far have they progressed with their training? ( years/months)
3. If you do not have any apprentices, are you willing to talk to VACC about recruiting an apprentice and participating in the following apprentice training delivery plan?

You can find the proposed motorcycle apprentice training delivery plan by clicking [here](#).

VACC has considerable experience in the recruitment and training of apprentices, your participation in a professionally managed training delivery plan will benefit your business. The profitability of fixed operations within your business is very important to your long term sustainability. Skilled staff in your workshop is important!

I look forward to receiving the requested information from you.

Best regards
