## Case Study – Un-Roadworthy Vehicles

Dear Member

The TACC is working closely with the Tasmanian State Government's Road Safety Advisory Council (RSAC) on the **Towards Zero Action Plan 2020 - 2024**". (TZAP)

Under the TZAP, a light vehicle strategy plan is being developed to ensure that vehicles on our roads are **always in a roadworthy condition**.

To gather information relating to vehicle roadworthiness we are inviting members to participate in the collection of data that will provide evidence of a vehicle's roadworthiness when presented at your business for either a:

- Repair
- Routine Service
- AIS Inspection

Be in to win and click [here](#) to gain access and record your data. We would expect each survey will take **three minutes to complete per vehicle**.

Photographic evidence is always a great way to demonstrate - use the "browse file" tabs provided to upload as many as you can.

### How will my returned data be used?

Reports are collected only by TACC and your business will remain anonymous. The information you provide will assist us in identifying trends and will provide evidence that will assist us in finalising our submissions to the RSAC. You may be contacted further if we need additional information.

We look forward to your support on this important vehicle safety initiative.

Please do not hesitate to contact us if you need further advice or assistance.
